

For the Hafele Full Extension TV Swivel Platform 180° Pivot (Item #HA423.93.310), please note that mounting hardware is not included, so the appropriate fasteners will depend on your cabinet material and construction. General Installation Recommendations: 1. Mounting to cabinet base (wood / plywood): - #10 or #12 wood screws - Length: typically 1"-1-1/2" (depending on cabinet thickness) - Use flat washers for better load distribution 2. Mounting to particle board / MDF: - Confirmat screws or coarse-thread wood screws - Consider adding threaded inserts for added strength 3. Mounting to metal framing (if applicable): - Machine screws with lock nuts or threaded holes 4. Anchoring considerations: - This unit supports up to 132 lbs, so it must be installed into a solid structural base (not thin panels alone) - If the cabinet base is not reinforced, we recommend adding a backer board (3/4" plywood) beneath the mounting area 5. Additional tips: - Pre-drill all holes to prevent splitting - Ensure the unit is mounted level for smooth slide and swivel operation - Because of the extension and pivot (leverage effect), secure fastening is critical for safety and performance
